Investor Narrative

Company: isteBul · **Stage:** Seed · **Market:** Turkey · **Config:** data/investor/investor-narrative.json

One line

Decision infrastructure for high-consideration purchases — starting with automotive in Turkey, expanding across housing, finance, insurance, and travel on a shared engine.

Problem

Consumers make **₺500K–₺3M** decisions with fragmented tools: classifieds show inventory, banks show a single product, and generic AI invents prices. Nobody unifies **fit, total cost of ownership, finance load, and neutral execution** in one auditable workflow.

Buyer truth: *"I need to know if this car fits my budget and life — not just the monthly payment the dealer quoted."*

Solution

Pillar	What we ship
Decide	Multi-factor match, confidence tiers, TCO profiles
Explain	LLM narrates deterministic numbers — cannot override scores
Close	Qualified leads → HMAC webhooks → CRM → outcome feedback

Demo: <https://www.istebul.com/auto> — scores update as inputs change.

Why now

1. **AI trust crisis** — explainable numbers beat black-box chat. 2. **Finance margin pressure** — partners need scored intent, not form spam. 3. **Product is live** — weekly metrics:investor:pack, not slideware.

Why us

- Decision IP in production** — decision-consultant, scoring explainability, anti-hallucination architecture.

- **Partner flywheel** — dispatch → win data → scoring calibration.
 - **Platform optionality** — 8 verticals + locale registry on one engine.
-

Vision (36 months)

Category leader for decision intelligence in Turkey; **3+ verticals** at production parity; **outcome graph** built from closed deals (actual_revenue, partner callbacks).

The ask (founder completes)

Field	Template
Round	[e.g. seed ₺X]
Runway	18 months
Milestones	2+ partner LOIs · Pro MRR growth · live data feed · konut parity
Use of funds	See FINANCIAL_MODEL.md / financial-model.json#useOfFunds

KPI hikâyesi

KPI Story

Headline: Every traction number in the deck maps to a production query or export — no static placeholders in slide 7.

Config: data/investor/kpi-story.json · **Bindings:** data/investor/metrics-story.json

North star

Priority	Metric	Owner
Primary	Qualified leads / week	Growth
Secondary	Pro MRR (TRY)	Revenue
Secondary	Partner realized revenue (TRY)	Partnerships

Priority	Metric	Owner
Secondary	Blended ARR signal	CEO

Formula: $\text{Blended ARR} \approx \text{Pro ARR} + \text{realized partner pipeline (auto_leads.actual_revenue)}$.

Chapter 1 — Revenue quality

Talk track: We report Pro MRR from Stripe normalization and partner **actuals** from CRM — not estimates alone.

Metric	Export key
Pro MRR	subscription.mrrTry
Pro ARR	subscription.arrTry
Active Pro subs	subscription.activeSubscriptions
Partner actuals	pipeline.pipelineActualTry
Blended ARR	blendedArrTry

Chapter 2 — Partner supply

Talk track: Dispatch and win rate prove monetization is operational.

Metric	Export key
Leads in CRM	pipeline.leadCount
Dispatched	pipeline.partnerDispatchCount
Wins	pipeline.partnerWinCount
Win rate	pipeline.winRate
Actual / estimated	pipeline.realizationRate

Chapter 3 — Product demand

Talk track: Funnel metrics are sample-capped (5k events) — disclose in diligence; Series A needs a warehouse.

Metric	Export key
Page views	funnel.pageViews
Lead submits	funnel.leads

Metric	Export key
Checkout completion %	funnel.checkoutConversionPct
View → lead %	funnel.leadConversionPct

Board cadence

Cadence	KPIs
Weekly	Qualified leads/wk, Pro MRR, partner actuals
Monthly	Checkout CR%, partner win rate, churn signal
Quarterly	Blended ARR, LOI count (offline), vertical roadmap %

Export before every meeting

```
npm run metrics:investor:pack
```

Use `dist/investor-readiness-pack.json` → `metricsStory.slides[].resolvedMetrics`.

Implementation: `js/features/metrics/investor-kpis.js` · Admin → **Investor KPIs**

Monetizasyon

Monetization Story

Headline: Hybrid SaaS + marketplace — we monetize trust in the **decision moment**, not page views.

Config: `data/investor/monetization-story.json` · **Unit economics:** `UNIT_ECONOMICS.md`

Revenue engines

Stream	Type	Status	Investor line
isteBul Pro	Recurring	Live	Predictable ARR; ₺299/mo · ₺2,870/yr · 7-day trial
Partner leads (CPL)	Transactional	Live	Scales with partner density; CRM tracks actuals
Premium reports	Add-on	Partial	ARPU uplift when merchandised on results

Stream	Type	Status	Investor line
Finance / insurance affiliate	Affiliate	Early	Neutral comparison → bank/insurer CPL
B2B API	Platform	Roadmap	Dealer groups license decision engine (phase 3)

How money moves (live today)

Pro

Visitor → checkout → Stripe → subscriptions → investor-kpis MRR

Partner

Wizard → auto-intake → dispatch → webhook → CRM actual_revenue

Blended signal: $\text{Blended ARR} \approx \text{Pro ARR} + \sum \text{partner actual_revenue}$

Pricing bands (partner — validate with contracts)

Tier	CPL band (TRY)
Starter	₺5,000–8,000
Growth	₺8,000–12,000
Enterprise	Custom capacity

Revenue quality at scale (targets)

Mix	Target %
Recurring (Pro)	40%
Partner	55%
Other	5%

Early stage may be **partner-heavy** — disclose mix from live exports.

Diligence proof

1. npm run metrics:investor 2. Admin → **Investor KPIs** 3. Offline: partner LOI / CPL term sheets
4. Stripe dashboard MRR vs computed MRR reconciliation

Pazar büyüklüğü

Market Sizing (Verified)

Version: p7.2 · **As of:** 2026-05-24 **Data:** data/investor/market-sizing.json · **Research:** data/investor/market-research.json

All [FOUNDER_VERIFY] placeholders replaced with **ODMD**, **TÜİK**, and **BDDK / industry** citations.

Researched sub-markets (Turkey)

Market	Volume / size	GMV or SAM (TRY)	Source
Sıfır otomotiv (ODMD)	1.238.509 adet (2024)	~₺1,67T GMV	ODMD via GCM yatırım özeti
İkinci el binek (TÜİK noter)	7.103.550 devir (2024)	~₺5,33T GMV	TÜİK Motorlu Kara Taşıtları
Çevrim içi 2. el (Indicata)	2.091.918 satış (2024)	~₺1,36T channel GMV	Indicata / CNBCe
Otomotiv marketplace SAM	500K karar oturumu	~₺2,6B	isteBul model
Bayi yazılım (DMS)	~3.500 outlet	~₺630M/yıl SAM	Otosoft / Hitsoft segment
AI otomotiv retail (TR)	Global \$8,6B (2025)	~₺450M TR SAM	DataIntelto + TR pay

TAM · SAM · SOM

Layer	TRY	Definition
TAM (GMV pool)	~7,57T	Sıfır + 2.el auto GMV + konut/finans havuzu
Platform revenue TAM	~76B	~%1 of pool — CPL + SaaS + affiliate
SAM	~7,1B	Decision sessions × ARPU (4 sub-markets)
Beachhead SAM (auto)	~1,76B	TR auto decision + lead
SOM (36 mo, base)	~21,6M ARR	financial-model-template Y3 run-rate

SOM live override: npm run metrics:investor:pack → marketSizing.som.illustrativeSomTry

Housing & credit (BDDK + TÜİK)

Metric	2024 value	Source
Konut satışı	1.478.025	TÜİK / AA
İpotekli satış	158.486 (%10,7)	TÜİK
Konut kredi stoku	₺551,7B	BDDK (nisan 2025 bandı)
Bireysel kredi toplamı	~₺3,6T	BDDK / Matriks Ekim 2024
Taşıt kredileri	~₺12,8B (pay)	BDDK bireysel kırılım

Deck bullets (copy-paste)

1. Türkiye **7,1M** ikinci el binek devir (TÜİK 2024) — karar katmanı için dev hacim. 2. **1,24M** sıfır araç (ODMD 2024) — beachhead doğrulandı. 3. Platform SAM **~₺7,1B** — SaaS + CPL + AI retail wedge. 4. SOM **~₺21,6M ARR** Y3 (base model) — canlı export ile güncellenir.

Moat

Moat Articulation

Thesis: We own the **decision layer** above listings and bank calculators — not inventory.

Config: data/investor/moat-story.json • **Deep dive:** MOAT_AND_DEFENSIBILITY.md • COMPETITIVE_MOAT_STRATEGY.md

Elevator

Rule-based scores + TCO + explainability; LLM only narrates. Partner dispatch closes the loop.

Four pillars (investor lines)

Pillar	Strength	Investor line
Decision IP	High	Tested scoring, confidence tiers, AI cannot override price/score
Data & truth layer	Medium	Path to strong moat via live feeds + outcome graph ("models that closed in 14d")
Partner network	Medium-high	Qualified intent → SLA → win data → better scoring
Platform optionality	Medium	Auto beachhead funds konut, finance, insurance on shared engine

Honest gap (disclose): liveProvidersEnabled false until exclusive feeds — do not overclaim data moat today.

What is NOT a moat

- Generic LLM wrapper
 - SEO without retention
 - estimated_revenue without signed CPL contracts
-

Competitive frame

Competitor type	Their wedge	Our counter
Classifieds	Inventory	Decision + TCO + finance fit
Banks	Single-product origination	Neutral multi-offer comparison
OEM	Brand bias	Neutral rank + alternatives
ChatGPT	Generic advice	Deterministic numbers + CRM

Flywheel (operational moat)

SEO/paid → wizard → qualified lead → dispatch → outcome → calibration → trust → more leads

Code proof: partner-dispatch, HMAC webhooks, outcome-capture, P6.2 CRM pipeline.

Path to strong moat (Series A narrative)

1. Exclusive live catalog feeds 2. Anonymized outcome graph across verticals 3. Partner network density (10+ endpoints, SLA < 15m p95)

Birim ekonomi

Unit Economics Model (P17)

Investor-grade financial visibility: **CAC**, **LTV**, **ARPU**, **payback**, **gross margin**, **partner margin**, **AI cost per user**, **support cost**, and **conversion economics**.

Code: js/features/investor/unit-economics-model.js **Assumptions:** data/investor/unit-economics-model.json **Admin:** Executive KPIs → Unit economics panel **Export:** npm run metrics:unit-economics → dist/unit-economics-snapshot.json

Metrics map

Metric	Formula (TRY unless noted)	Live source
ARPU	MRR ÷ billable subs	executive-dashboard / Stripe
CAC	Marketing spend ÷ new paid conversions	paid-spend.json + paid_conversion events
LTV	ARPU × gross_margin% × lifetime_months	Model + churn proxy
Payback	CAC ÷ (ARPU × gross_margin%)	Derived
Gross margin	(ARPU – Stripe – variable costs) ÷ ARPU	Stripe % + AI + support
Partner margin	(Actual – partner share – dispatch) ÷ actual	auto_leads CRM
AI cost / user	Groq calls/mo × \$/call × FX	P16 infra guardrails
Support cost / user	Tickets/MAU × cost/ticket	Support analytics events
Conversion economics	Cost/lead, cost/paid, rev/paid, funnel CR%	Executive funnel

Formulas

```
monthly_churn_proxy = cancel_at_period_end / active_billable (capped 0.5%–25%)
lifetime_months = 1 / monthly_churn_proxy (cap 60, else target 14)
```

```

gross_margin_pct = (ARPU - stripe_fees - variable_cost_per_user) / ARPU
LTV = ARPU × gross_margin_pct × lifetime_months
CAC = Σ paid_spend / new_paid_users_in_window
payback_months = CAC / (ARPU × gross_margin_pct)
LTV_CAC_ratio = LTV / CAC

partner_net = actual_revenue - take_rate% - (leads × dispatch_cost)
partner_margin_pct = partner_net / actual_revenue

ai_cost_per_pro = ai_calls_per_month × est_usd_per_call × usd_try
support_cost_per_user = (tickets / MAU) × cost_per_ticket (or modeled default)

```

Planning assumptions (default)

Driver	Value
Pro ARPU	₺299/mo
Target CAC	₺1.200
Target gross margin	72%
Target LTV months	14
Target payback	≤ 6 months
LTV/CAC minimum	3×
Stripe fee	3.2% + ₺2.5
AI calls / Pro / month	4
Support	12 tickets / 1k MAU · ₺85/ticket

Edit data/investor/unit-economics-model.json for board scenarios.

Live data imports

1. **Paid spend (CAC):** Copy data/growth/paid-spend.template.json → paid-spend.json weekly (Meta, Google, etc.). 2. **Subscriptions (ARPU/MRR):** Supabase subscriptions + investor-kpis.js. 3. **Funnel (conversion economics):** analytics_events via executive dashboard (30d window). 4. **Partner margin:** auto_leads.estimated_revenue VS actual_revenue.

CLI exports

```

# Live (requires Supabase service role)
SUPABASE_URL=... SUPABASE_SERVICE_ROLE_KEY=... npm run metrics:unit-economics

# Planning-only (assumptions + formulas, no DB)

```

```
node scripts/unit-economics-snapshot.cjs --planning

# Related
npm run metrics:investor
node scripts/infra-unit-economics-snapshot.cjs
```

Investor workflow

1. Weekly: `metrics:unit-economics` + `metrics:investor` → attach JSON to data room. 2. Reconcile MRR with Stripe (`docs/investor/STRIPE_MRR_EVIDENCE.md`). 3. Present **LTV/CAC** and **payback** with explicit spend import status (`model.health`). 4. Show **partner margin** separately from Pro SaaS (hybrid revenue story).

Riskler

Risk Register (Investor Due Diligence)

ID	Risk	Severity	Mitigation	Status
R1	Simulated pricing — not live market feeds	High	Truth layer + provider roadmap; disclose in product	Open
R2	Financial advice regulation — decision outputs perceived as advice	Medium	Disclaimers, no binding offers, “simulation” labels	Partial
R3	KVKK / GDPR — thin legal pages	Medium	COMPLIANCE_READINESS_AUDIT.md; counsel; DPA	Partial
R4	Partner revenue — estimated vs contracted	High	LOIs, actual_revenue discipline, audits	Open
R5	AI hallucination — trust loss	Medium	Rule engine + sanitizeAiNarrative	Mitigated
R6	Single-market concentration (Turkey)	Medium	Global i18n foundation, EN/DE/AR routes	In progress
R7	Supabase/CF vendor lock-in	Medium	PRODUCTION_RESILIENCE_AUDIT.md; backup/PITR; runbook	Partial

ID	Risk	Severity	Mitigation	Status
R8	Analytics undercount — consent gate	Medium	Server-side events; optional analytics-free mode doc	Open
R9	Key person / founder dependency	High	Document ops runbooks; hire GTM + eng	Founder
R10	Competition — incumbents add AI	Medium	Moat on workflow + partners + data	Ongoing
R11	Churn unknown — limited subscription history	Medium	Stripe cohort reporting	Open
R12	Security incident	Medium	Launch audit, RLS, webhooks; no pen test yet	Partial
R13	Doc drift (Netlify vs Cloudflare)	Low	DATA_ROOM_INDEX + Cloudflare deploy docs	Mitigated
R14	Monolith app.js — velocity risk	Medium	MAINTAINABILITY_AUDIT roadmap	Open

Regulatory subprocessors

See SUBPROCESSORS.md. Investors should confirm DPAs with Supabase, Stripe, Groq, Cloudflare.

Insurance / liability

Terms of use are minimal — **not investor-grade**. Counsel should add limitation of liability and arbitration before scale.

Canlı metrikler için: `npm run metrics:investor:pack` · Bu rapor statik özet içerir; toplantı öncesi snapshot güncellenmelidir.
